# Green Social Work (GSW)

Why should social workers do green social work?  
Discuss with the person on your right.

# Defining Green Social Work (GSW)

Green social work affirms environmental justice within social justice while promoting social development. GSW:

‘focuses on how the social organisation of relationships between peoples and their interaction with the flora and fauna in their physical habitats create the socio-economic and physical environmental crises that undermine the well-being of human beings and planet earth’ (Dominelli, 2012:25).

Green Social Workers assess the risks posed by hazards and argue for:

- locality specific and culturally relevant practice.
- profound holistic conceptual and social transformations.
- sustainable relationships among peoples, other living things and inanimate world – caring for planet earth.
- transdisciplinarity relates to all sciences and professions in engagement with local communities/residents.

# Defining Environmental Justice

- Environmental justice is the right to live in a sustainable, healthy environment that enables all peoples to use the earth's resources to meet current needs without jeopardising future generations' use of these while caring for the planet and all it contains.
- Duty to care for and care about others (oneself, Earth).
- This responsibility is holistic and global because it affirms interdependencies between people, their physical, social, political, economic and cultural environments as part of one whole.
- Recognises differentiated experiences of disaster.

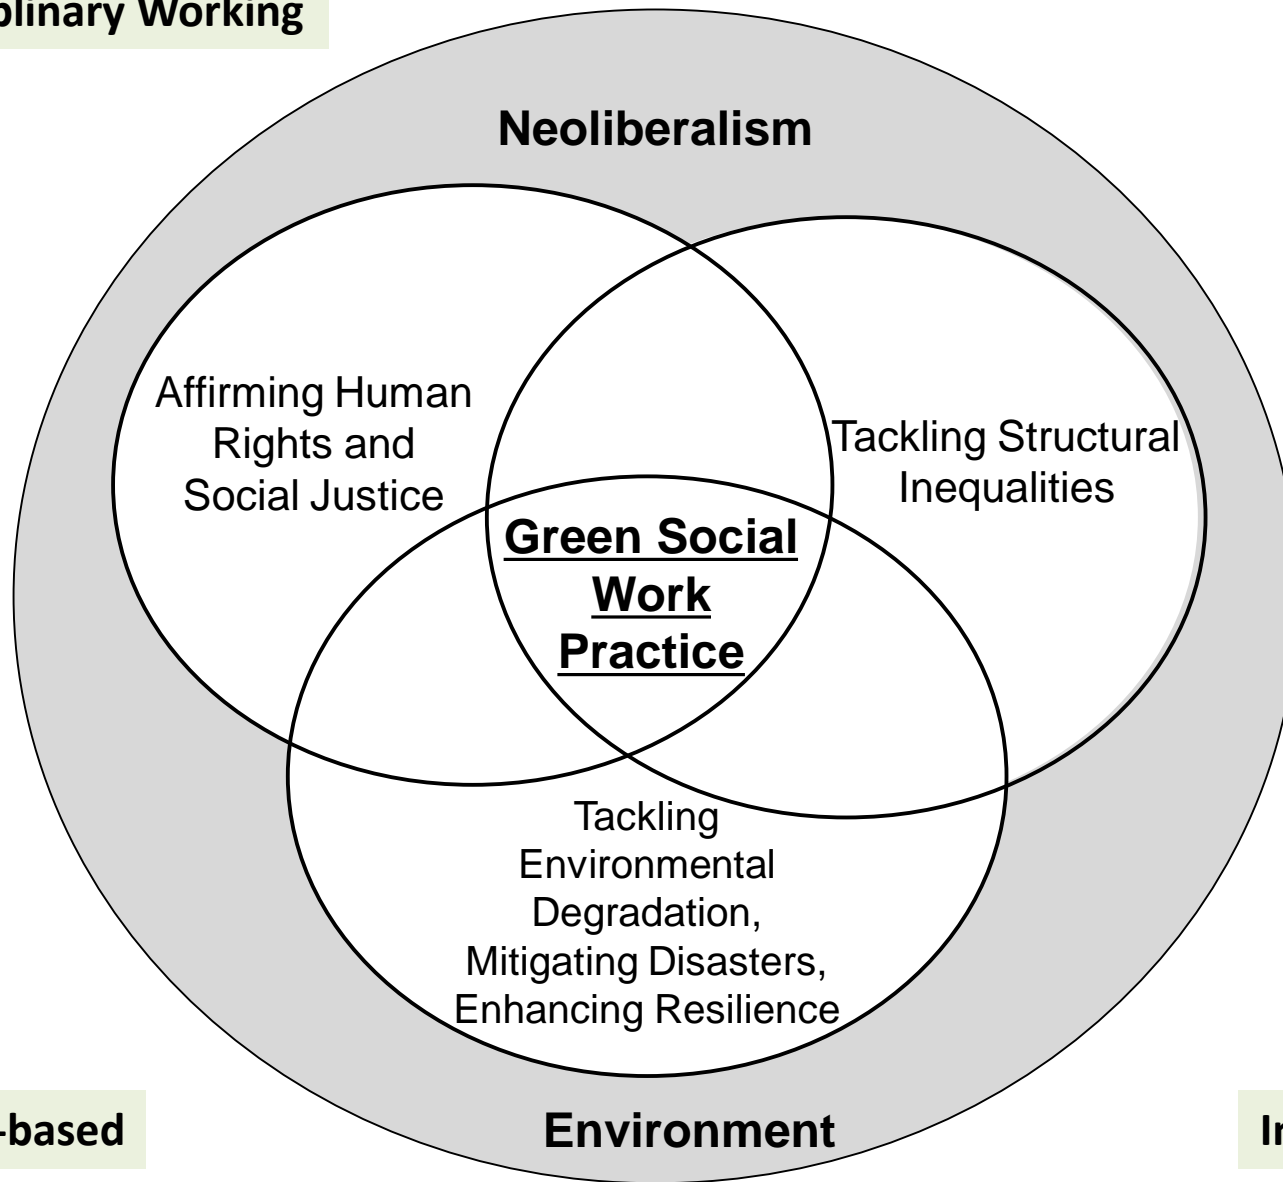

# Issues of environmental justice affect everyone

- Environmental justice is linked to social justice for all and integral to social work and community development in the 21<sup>st</sup> century.
- Achieving this requires paying attention to:
  - How the earth's resources and labour power are used.
  - Developing sustainability as the capacity to meet human needs now and in the future without costing the earth.
  - Creating and maintaining global solidarities.
  - Mitigating and responding to disasters.
  - The limitations of current models of urbanisation and industrialisation.
  - Social policy failures in implementing environmental justice, e.g., neoliberal economic development, Kyoto Protocol, climate change.
- Green social work issues affect everyone.

**Transdisciplinary Working**

**Coproduction**

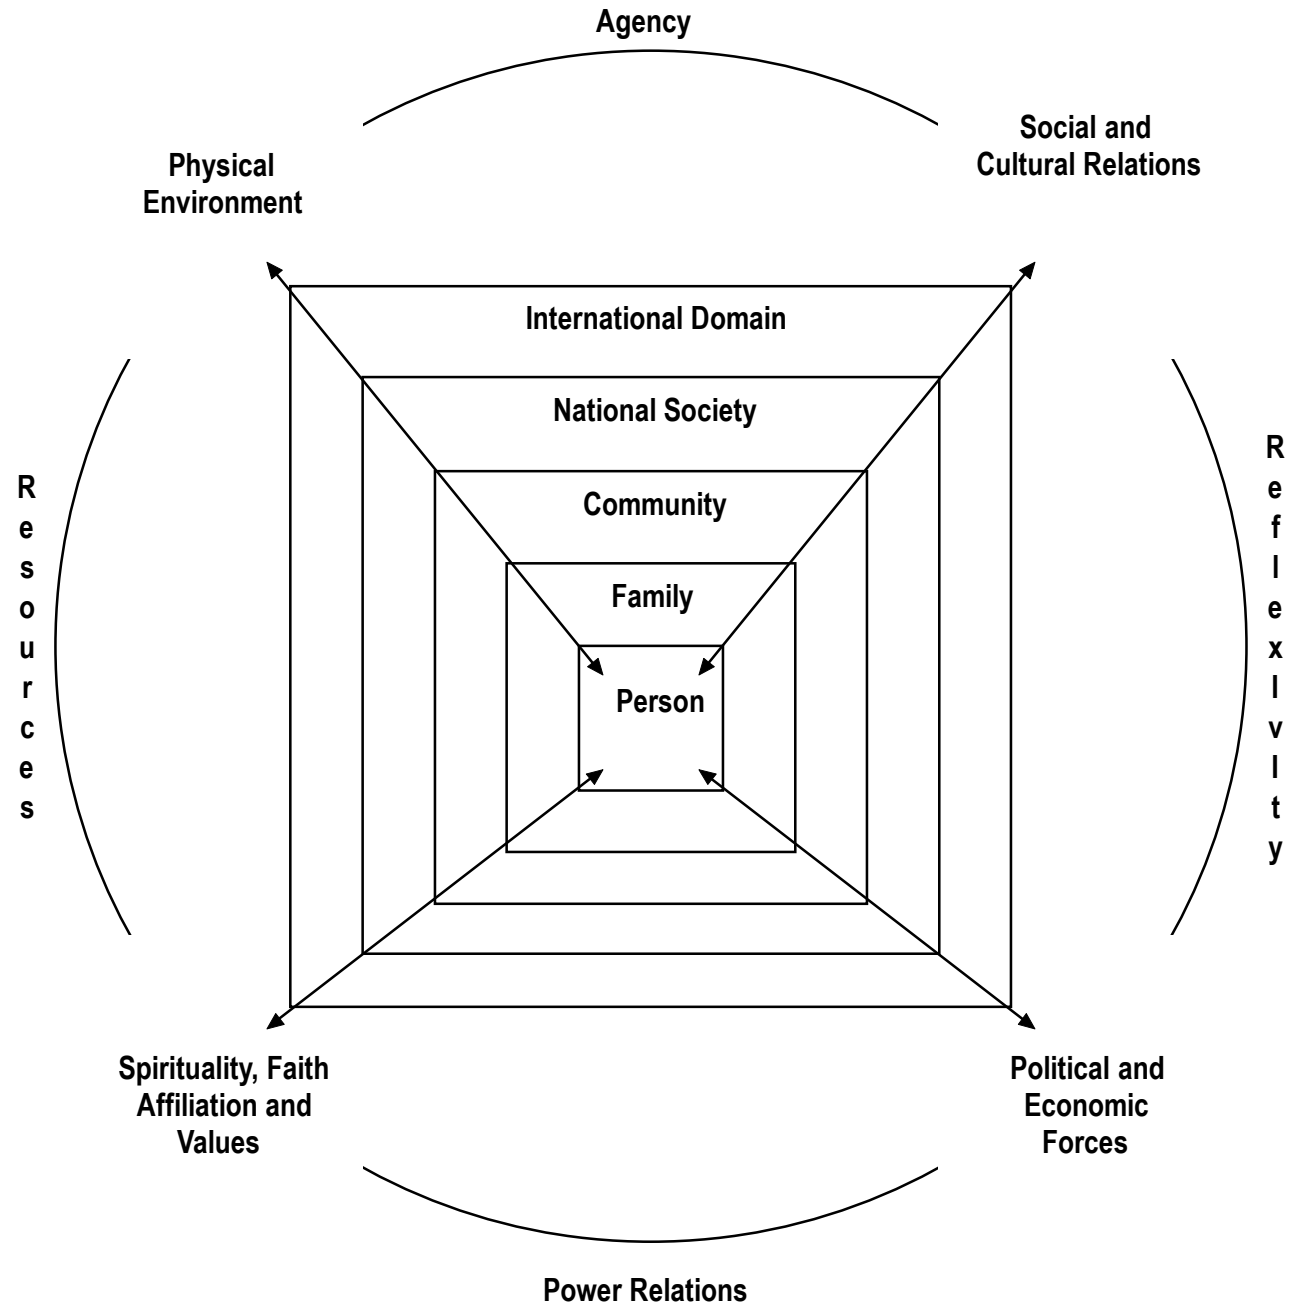

**Evidence-based**

**Innovative Action**

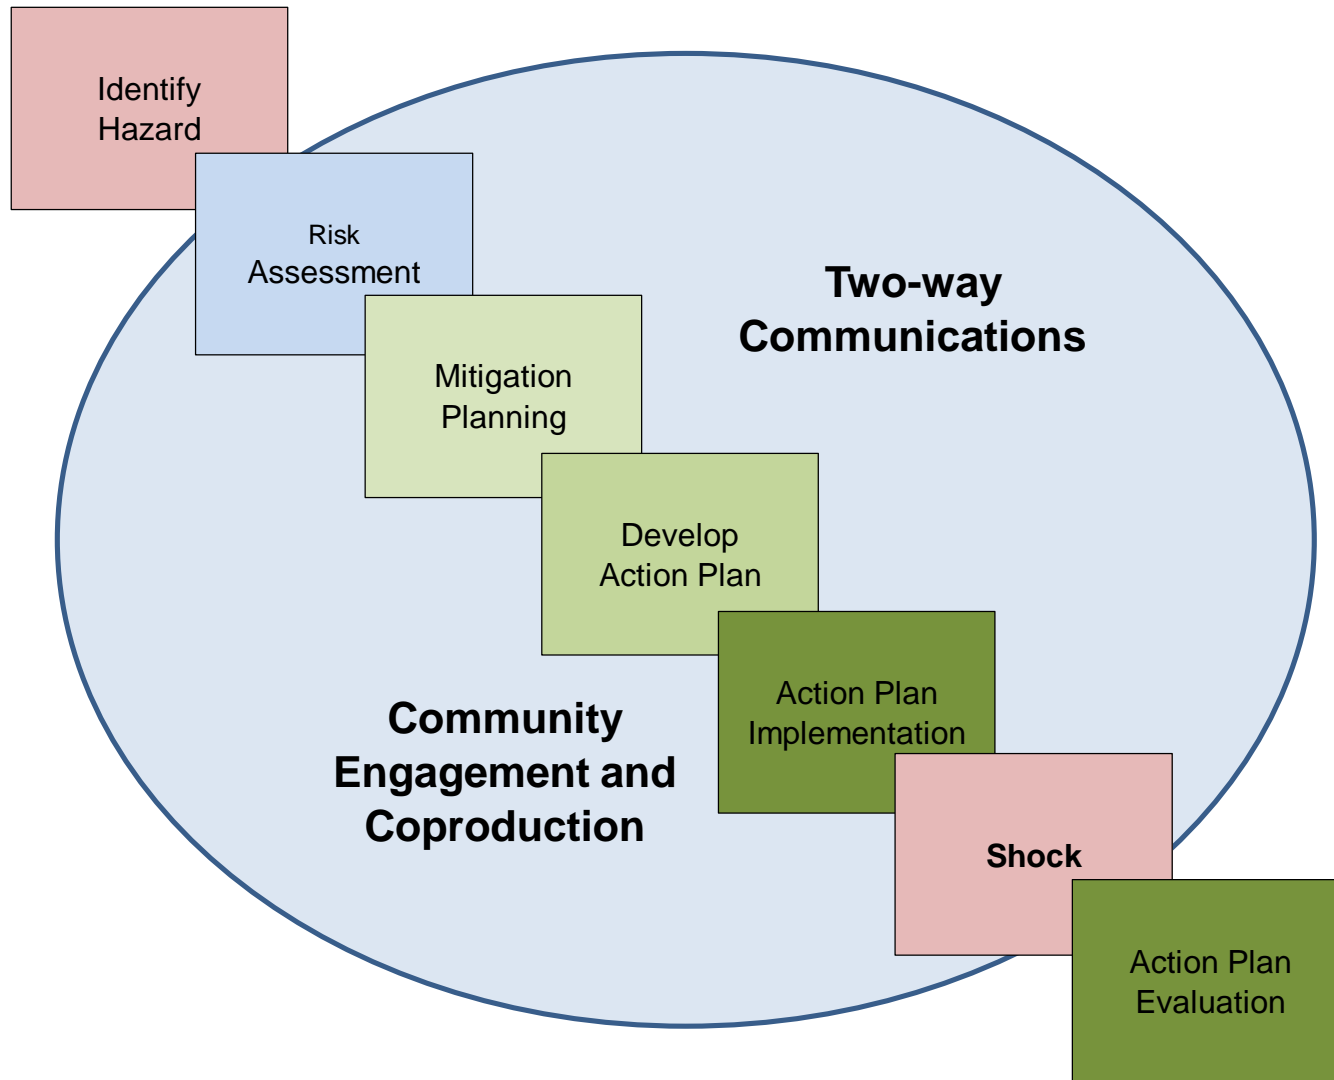

**Green social work practice (values and action) tackles the oppression of people and degradation of the environment and critiques neoliberalism's approach to exploiting people and earth's resources.**

Oppressive Social Work  
Theory and Practice  
(Palgrave)

# Green Social Work Processes and Intervention in Disasters

Generic social work skills

# Transferable Evidence-based Disaster Risk Reduction Partnership Model

## Dependent on:

- Disaster Type
- Legislation
- Policy
- Context
- Setting
- Partnership

# The Personal Dimensions of the Disaster Transitions and Recovery Cycle

## Disaster Transition and Recovery Cycle

Adapted from Hopson and Adams (1976)

Disasters raise a variety of emotions in the individuals concerned as they move from experiencing a disaster to moving towards adjusting to it and mitigating risk. Green social workers address individual concerns and structural inequalities.

You Could Be Doing a Placement in Any of the Following Situations:

Burnside Gorge Community Centre  
Creates Rooftop Garden in 2007

Gets Platinum Green Roof Award in 2009

**Social workers assess risks posed by these hazards and help people survive with practical assistance and psychosocial help**

# Social Workers and Health Workers Providing First Aid

Kathmandu, Nepal

# Exercise for Breakout Group (10 mins)

- There is an extensive flood in rural Rosedale, B.C. The railway and road infrastructures, housing, and shops have been inundated, and a state of emergency has been declared in the area. You are on placement there in a community group working on sustainable development. You cannot leave the office which is the safest place for you. You remember that you have been told that you must:
  - a) do no harm to those you are serving;
  - b) be prepared for any eventuality; and
  - c) engage in self-care.
- In your group discuss points a to c and decide what you would do. Choose one person to take notes and another person to feedback to the larger group.

## Conclusions:

**An urbanised, polluted world requires a holistic, transdisciplinary social work curriculum to pursue green credentials**

**Green social workers engage community stakeholders and residents in a process of coproducing solutions to agreed problems**

## Questions?
